

TimberTech composite decking

TimberTech's composite decking is a revolutionary alternative to traditional wood decking. With TimberTech composite decking, you get a non-slip, splinter-free surface that doesn't need painting, staining or sealing.

Unlike timber decking, TimberTech resists fading, weathering, rotting and warping – it stays looking new year after year. TimberTech is backed with a 25-year warranty.

Composite decking that looks like timber decking

Our patented manufacturing process uses a variety of cellulose materials, wood flour and virgin polyethylene. The result is a composite decking product that is more consistent, more natural looking and of higher quality than composites that use recycled materials.

TimberTech is easy to install

TimberTech composite decking and railings offer easy and consistent installation, diverse design solutions and a natural style that creates the ultimate outdoor living area. With an array of decking profiles, colour options, high-quality surfaces and size choices, you can customise any outdoor decking to meet your needs.

Save time and money with TimberTech

Since TimberTech is made with a unique process that turns reclaimed hard wood and pure polymer resins into a strong, moisture-resistant decking, you'll not have to stain, seal or paint. Not only does this save you time over the life of your deck, but it will save you money, as well.

Is your timber decking ready for a TimberTech makeover?

Before you start sanding, painting, staining, or sealing it — again — consider re-boarding your deck with TimberTech. You can enjoy our beautiful, low-maintenance decking and railing with out starting from scratch. Taking advantage of a sound, existing wood substructure is usually more simple and affordable than building a new deck from the ground up. Various timber decking removal tools, which are widely available, make it easier than ever to remove existing decking and railings.

TimberTech composite decking - TwinFinish

TimberTech's TwinFinish decking is a high-quality decking option available in two attractive surfaces. One side features the exclusive Vertigrain surface finish that provides a bold, distinct look that resembles the look of premium timber. The other side features a Brushed Surface. And, its solid core and similarity to a traditional 140x25mm decking allows for design creativity and customisation.

TwinFinish decking product features

- The dense, solid decking is rigid, sag-resistant and easy to work with
- Each decking offers the two surface design options, Vertigrain and Brushed
- The Vertigrain surface provides a bold, distinct look and lacks the repetitive V-pattern found in other composites
- Spans up to 500mm between joists

- Actual dimensions 140mm wide x 25mm thick

TwinFascia board

Designed to trim your TimberTech deck and give it that finishing touch. Cedar, Grey and Redwood have a brushed surface on one side and a VertiGrain surface on the other. Available in 250mm wide by 3.69m lengths. Colours: Cedar, Grey, Redwood.

TimberTech Earthwood Decking

The Natural Look of Premium Tropical Wood. TimberTech's Earthwood deck board with VertiGrain™ surface has colour and grain variations that emulate natural variations in real tropical hardwood. Time and exposure will enhance the natural colour of the deck. Available in three warm, rich colours and two profiles. Choose from Tropical Rosewood, Tropical Teak and Tropical Walnut.

TimberTech Earthwood decking features

- Earthwood deck board with VertiGrain surface has colour and grain variations that emulate natural variations in real tropical hardwood; time and exposure will enhance the natural color of the deck
- No visible screws on the grooved deck board when installed with CONCEALoc™, TimberTech's new stainless steel hidden fastener
- The solid deck board provides a traditional decking option
- Actual dimensions 25mm thick x 10mm wide
- Spans a maximum of 500mm on-center for residential applications
- TwinFascia® is available in all three colours
- Square-edged board provides well-defined deck line
